ABSTRACT

1. Investigations on the Odonata fauna were carried out in Eastern and Southeastern Anatolia between 1981 and 1984.
2. Eighteen species, 12 genera, eight families were recorded.
3. *Ischnura senegalensis* (Rambur 1842) is a new record for Turkey.
4. The most represented family was Lestidae from Zygoptera Suborder with five species (27.78 %) and was Libellulidae from Anisoptera with four species (22.22 %).

KEY WORDS: Damselfly, dragonfly, Eastern Anatolia, fauna, new record, Odonata, South Eastern Anatolia, Turkey.
